

Care Instructions

Cleaning and Maintenance: Use a paste furniture wax, we recommend Butcher's Fine Amber Paste Wax, which can be found at any well stocked hardware store. Place a small ball of wax in a clean rag to form a pad to apply the wax. Rub in small circles to cover the desired area. Once the wax starts to "cloud" wipe off all of the excess with another clean rag. Let dry for 15-20 minutes and buff with yet another clean rag. **Never use water or any other solvent to clean your furniture. Use only a paste wax.**

For simple removal of scratches and water rings we recommend that you use Old English Almond Oil. The instructions can be found on the container. In case of serious damage from water or other liquids on a natural finish: Use #0000 steel wool to rub out the spots. At this point you may either follow the instructions above, or for better results you may apply a wiping varnish. We recommend Behlen's Rockhard Table Top Varnish, or Sutherland & Welles Low Lustre Wiping Varnish. Apply the varnish with a pad folded from a clean rag in small circles and let sit for one minutes. Remove all excess with a clean rag. Let dry overnight and follow the Cleaning & Maintenance instructions to apply wax.

Do not use this method if you have a piece that has been stained as the steel wool will remove the color from your piece.

For damage repair of a custom stained finish contact Tucker Robbins Unlimited for a custom repair kit that will be assembled according to your specific finish.
